Is a solar power plant a conventional power plant?

The solar power plant is also known as the Photovoltaic (PV) power plant. It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant.

Solar PV plants whose capacities range from 1 (MW) to 100 (MW) [7] are considered to be large-scale P V plants and they require a surface that exceeds 1 (km 2) [8].A large-scale P V plant comprises: P V modules, mounting system, inverters, transformation centre, cables, electrical protection systems, measurement equipments and system monitoring. The P ...

The PSH system has a dual function. On the one hand, it functions as a load when the PV power is higher than the energy demands. It saves the maximum extra power from the PV source as long as possible until it is full

of charge. On the other hand, it functions as an energy source when the PV power is less than the energy demands.

Figure 1 shows how a system would operate when the PV and BESS are being used to supply all the daily energy. Figure 1: PV system meeting energy demand during day and charging batteries for energy to be used in the night 2.2. Offsetting Peak Loads When a BESS is intended to offset peak loads, the aim is to reduce the peak demand by using energy
