Find your Solar Hours per Day using the color-coding on this map. Enter the value for your location into the solar calculator. The solar map uses insolation, a measure of solar radiation energy received on a given surface area in a given time. This is typically measured in kilo-watt hours per square meter per day (kWh/m2/day).

Energy use is measured in Watt-hours (Wh). Solar panel sizes are measured in Watts (W), which is a rate of electrical flow. We'll use your energy use in Watt-hours to determine how many Watts of solar panels you need. Here's the solar panel calculation: Figure out how many daily Watt-hours (Wh) you will use, then add ~20% cushion to it
