This article provides an overview of high-frequency inverter topologies, design considerations, applications, and advantages versus traditional lower frequency inverters.

What is a standard inverter setup?

Today's standard inverter setup in the power range of 200kVA with 1200V IGBTs and in B6 topology are in many cases constituted of a laminated bus barto connect the DC-Link capacitors and the power module. An example for this type of design is the Infineon Stack 6PS0400R12KE3-3F-C4V, visible in figure 2.

Which EV traction inverter is best?

For EV traction inverter,more efficiency and right performance are key. While IGBTis ideal for cost-optimized drive-train,SiC demonstrates higher efficiency under WLTP partial load scenario. Infineon offers the best scalability in market between IGBT and SiC,allowing customers to freely choose the technology for their needs,

What is a low inductance and high temperature capable inverter setup?

Low inductance and high temperature capable inverter setup Today's standard inverter setup in the power range of 200kVA with 1200V IGBTs and in B6 topology are in many cases constituted of a laminated bus barto connect the DC-Link capacitors and the power module.

What are common high-frequency inverter circuit configurations?

Common high-frequency inverter circuit configurations include: Key design factors for high-frequency inverters: Switching frequency - Higher frequency allows smaller filter components but increases losses. Optimize based on tradeoffs. Filter components - Smaller inductors and capacitors possible at high frequencies. Balance size versus performance.

How does traction inverter technology improve system efficiency?

This design demonstrates the traction inverter system technology that improves system efficiency by reducing the overshoot in available voltageswith a high-performance isolated gate driver. The real-time variable drive strength of the gate driver enables inverter efficiency improvement.

The power module is an in-house development by Hitachi Astemo. The capacitors were designed in cooperation with a subcontractor.
