is a characteristic of the battery chemistry and packaging. It determines the battery weight required to achieve a given performance target. o Energy Density (Wh/L) - The nominal battery energy per unit volume, sometimes referred to as the volumetric energy density. Specific energy is a characteristic of the battery chemistry and packaging.

Today"s EV batteries have longer lifecycles. Typical auto manufacturer battery warranties last for eight years or 100,000 miles, but are highly dependent on the type of batteries used for energy storage. Energy storage systems require a high cycle life because they are continually under operation and are constantly charged and discharged.
