Control ChallengesIn Section II the high frequency variable load inverter was modeled with each constituent inverter as an ideal voltage source that could drive any resistiv / inductive load, only sub-ject to maximum output voltage and current limits. However, real inverters h

Is a new inverter architecture suitable for varying load impedances?

Abstract: This paper presents a new inverter architecture suitable for driving widely varying load impedances thigh frequency (HF,3-30 MHz) and above. We present the underlying theory and design considerations for the proposed architecture along with a physical prototype and efficiency optimizing controller.

Which inverter topology features bidirectional power flow?

The most common inverter topology featuring bidirec- tional power flow is the HF linkwith a cycloconverter out- put stage [7,8], shown in Fig. 2 b This method has the drawback that the cycloconverter power semiconductors operate at high frequency, thus having high switching losses and high cost.

#### What is a HF link inverter?

In many applications it is important for an inverter to be of relatively small size and lightweight. This can be achieved by using a high-frequency(HF) link inverter topology. A popular HF link inverter topology is the so-called DC/DC converter type,Fig. 2 a

#### What is HF bridge inverter?

An HF bridge inverter produces a 50Hz modulated SPWM HF wavewhose voltage level is boosted by an HF transformer. An active rectifier rectifies Fig.1Low-frequency inverter design methods aBridge-type inverter bInverter design consisting of a DC/DC converter and power bridge

#### Why do we need hfvli inverters?

This allows for the use of highly efficient zero-voltage switching inverters that would otherwise be precluded or limited in applications presenting wide impedance ranges, such as wireless power transfer and RF plasma generation. The prototype HFVLI system demonstrates the benefits of the proposed approach.

The buck-boost inverter can convert the PV module"s output voltage to a high-frequency square wave (HFSWV) and can enhance maximum power point tracking (MPPT) even under large PV voltage variations. The high-frequency transformer gives galvanic isolation for the system, which decreases the leakage current and improves the system power quality.

For this purpose, thin-film cables are usually used, either on the motor, on the inverter, or on the load, so high-frequency currents are derived to ground [99]. Within these solutions, a high-frequency grounding strap stands out that consists in a twisted cable which decreases the impedance between the motor frame and the ground [100]. 7
