

How does electricity storage work in Morocco?

It ensures the storage of electricity produced by renewable energies in order to adapt fluctuating supply to shifting demand. The first large-scale electricity storage project in Morocco is the 460 MW Afourer Pumped Storage Power Station (PETS), commissioned in 2004.

How can thermal storage be developed in Morocco?

Many thermal storage options can be developed in Morocco such as the storage of excess renewable electrical energy in buildings(e.g. domestic hot water tank). The development of district heating networks in Morocco can also give a growing role to the massive thermal storage in Morocco.

What is the first large-scale electricity storage project in Morocco?

The first large-scale electricity storage project in Morocco is the 460 MW Afourer Pumped Storage Power Station(PETS), commissioned in 2004. It consists of a hydraulic system composed of two 1.3 million-m3 water reservoirs connected by a pipeline with two hydroelectric production units between the basins.

How much electricity does Morocco use?

Morocco's electricity consumption in TWh . In 2018, Morocco installed 34% of renewable energy (i.e. 3,700 MW), divided as follows: 1,770 MW, 1,220 MW and 711 MW respectively originate from hydroelectricity, wind power and solar energy .

Does Morocco have a security of supply?

Security of supply also remains one of the major challenges of the Moroccan energy model, which it is attempting to address through the diversification of its energy resources. Morocco's primary energy demand and electricity demand will both be expected to double by 2030.

What is the Moroccan Agency for Solar Energy (MASEN)?

The Moroccan Agency for Solar Energy (MASEN) was set up specifically to execute these projects. Its mission is to implement all projects related to the National Energy Strategy and to co-ordinate and supervise all other activities connected with this initiative.
