What are solar roof tiles?

Solar roof tiles, also known as solar slates or solar shingles, are made to look a lot like normal roof tiles, except they also contain photovoltaic (PV) cells and can generate electricity. Unlike traditional solar panels, which sit on top of your roof, solar roof tiles are your roof, i.e. they completely replace your old tiles.

What are photovoltaic solar tiles?

Also known as photovoltaic solar tiles, they are conventional tiles designed to integrate photovoltaic cells that capture sunlight and convert it into electricity. These tiles combine the functionality of a roof with the ability to generate solar energy, offering an aesthetic and efficient solution for generating renewable electricity in homes.

Are solar roof tiles worth it?

Solar roof tiles are still capable of producing as much electricity as a traditional solar panel system, but to achieve this you may have to cover your entire roof with them - and this comes with a very hefty price tag.

Which solar tiles are best for your roof?

The glass used is strong and durable, providing adequate protection to the solar cells and ensuring a long service life. Clay or ceramic solar tiles are an ideal option for those looking to retain the traditional look of their roof. These tiles are made using clay or ceramic with a special surface layer that incorporates photovoltaic cells.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.

How to choose a solar roof?

Compared to conventional roofing materials, solar tiles often contribute greater weight. Thus, a sturdy roof is necessary to support the load. Energy production a crucial factor to consider when selecting solar tiles. Think about solar tiles' electricity output, which is between 25W and 114W.
