The simplest solution is to rectify the output and wire it to a synthetic sine wave inverter. I'm not actually kidding. Given that this is a fair amount of circuit design (even with pre-baked (single IC) solutions available, a complete design still requires a handful of transistors, capacitors, several diodes, and a couple dozen resistors, and all must be placed and wired ...

But in this article, we deeply discussed with the conversion of a high volt DC supply to an AC supply. For this, we need an electronic circuit board called an inverter. Mostly the inverter works with a 12 v battery or 48 v DC ...
