

A UPS won"t die when there"s a grid failure or power surge. The UPS is connected to the grid, but whereas anything drawing power solely from the main supply will be interrupted, the UPS battery keeps it working. A UPS also protects equipment from electrical damage and data loss that can occur during a power surge.

Key learnings: UPS Definition: A UPS (Uninterruptible Power Supply) is defined as a device that provides immediate power during a main power failure.; Energy Storage: UPS systems use batteries, flywheels, or ...
