Does geographical location affect the cooling performance of a cooling system?

The liquid air is used as the cold sources of the proposed cooling system and the liquid air is enclosed in an insulated tank. So the variation in weather conditions basically not affect the storage status of the liquid air. Therefore, the geographical location does not affect the cooling performance of the cooling system using liquid air.

Are liquid air energy storage systems economically viable?

"Liquid air energy storage" (LAES) systems have been built, so the technology is technically feasible. Moreover, LAES systems are totally clean and can be sited nearly anywhere, storing vast amounts of electricity for days or longer and delivering it when it's needed. But there haven't been conclusive studies of its economic viability.

Will a liquid cooled data center increase rack density?

Once a liquid-cooled system is introduced, data centers that may have previously been limited by the facility's ability to deliver sufficient air cool-ing may now have the opportunity for significant rack density increases. One can-not ignore comparable compliments of power delivery that might come in the future.
