Lithium-ion power battery pack

This paper presents a battery pack system in a demonstrated EV with 96 cells in series and discovers the battery power fade fault during the demonstration. The preliminary analysis, after collecting data and preprocessing the typical data periods, shows that the internal or contact resistance increase causes the fault.

Active (air-cooled) vs. passive (phase change material) thermal management of high power lithium-ion packs: Limitation of temperature rise and uniformity of temperature distribution: ... The recent collaborative research with the United States are mainly focused on Genetic Algorithm based thermal study on Lithium-ion battery packs [84], ...

The power battery pack of an electric vehicle contains many lithium-ion batteries, when the batteries are charged or discharged, a large amount of heat is generated, thereby requiring a battery thermal management system (BTMS) to remove the heat and guarantee a proper battery temperature.

In this study, a compact and lightweight liquid-cooled BTM system is presented to control the maximum temperature (T max) and the temperature difference (?T) of lithium-ion power battery pack. In this liquid-cooled solution, one thermal conductive structure (TCS) with three curved contact surfaces is developed to cool cylindrical battery.
