Should I use an OBD2 connector instead of a hard wire?

In researching I found several people who suggest OBD2 connector as alternative to either hard wire or power pack supply. The cam I am considering is the Viofo T130 & the idea of a plug-in option for power seems ideal, particularly as they come with a switch to do either Acc mode or longer term supply.

How to connect cigarette lighter to OBD2?

Cigarette Lighter to OBD2 16 Pin Male Connector Power Cable: This 3m/9.8ft cable is 12V in Male OBD out adapter you can use it to connect to an OBD II in a car. Interface connector between a 12V DC power source and vehicle's OBD II port: Compatible all OBD2 diagnostic tools with a 16 pin socket.

How much power does an OBD2 power pin need?

The OBD2 power pin must provide a minimum of 4A, which at 12V is 48W. This is more than a dashcam needs, but this might cause issues if you want to connect to an external battery pack as this is lower than what is available from the 12V cigarette outlet or the fusebox. You must log in or register to reply here.

What wires do I need for iroad OBD2?

Using the iROAD OBD2 cable provides the three wires needed by most hardwire kits: Battery (constant power),ACC (switched power),and Ground. You can just use the instructions for the hardwire kit to connect to the wires from the OBD2 cable. 3. Should you have an external battery pack?

Does the iroad OBD2 cable change ACC based on ignition?

The iROAD OBD2 cable doesn'tchange the ACC based on the car's ignition - instead it approximates it based on battery voltage and movement - so there is a delay in switching to parking mode. The OBD2 power pin must provide a minimum of 4A, which at 12V is 48W.

How many volts does the iroad OBD2 cable have?

This is 11.2Von the iROAD OBD2 cable,however many dashcams have this set higher (e.g. the Viofo hardwire cable's lowest setting is 11.8V). For this reason,it's a really good idea to have an external battery pack (this applies whether using an OBD2 connector or not).

An uninterruptible power supply (UPS) or uninterruptible power system is an electrical unit that provides power for computers, telecommunication equipment, etc. It not only offers emergency power backup but also protects the devices in use.

In the Ultron UPS family, three-phase online UPSs have power ratings of up to 4000 kVA, perfect for data centers, industrial facilities, and more. Three-Phase online modular uninterruptible power supply systems from the Modulon UPS family offer scalability and redundancy in a single frame, with up to 600 kVA. Delta's UPSs are some of the most ...

How to make an uninterruptible power supply. A UPS has four central parts: the static bypass switch, inverter, rectifier, and battery. The bypass switch turns the UPS into a safe bridge between incoming AC power and the destination. This can allow the power flow to bypass the UPS entirely and provide electricity even if the UPS fails.
