Say you have to provide 4-5A (~50-65W) a day. Solar panels need good sunlight to really produce power so you have to position your panel for maximum light. Depending on the location this may vary wildly (from only a couple to several hours per day). Usually you oversize the panel to help day with less than ideal sun days.

What is a portable power station? A portable power station, also known as a portable battery pack or a portable power supply, is a self-contained unit that stores electrical energy and can be used to power electronic

Outdoor power supply charging for several hours

devices. Unlike a traditional generator, which uses a combustion engine to produce electricity, a portable power station can last for several hours.

The duration a portable power station can last depends on its capacity, usage, and battery type. Generally, high-capacity stations, like those with over 2000Wh, can power small devices for days and larger appliances for several hours on a single charge. This provides more convenience than any wall charger or wireless charger when you're on the go.

For example, a small portable power station with a lithium-ion battery may be able to power a smartphone and a laptop for several hours, while a larger portable power station with a lead-acid battery may be able to power a refrigerator and a television for a few hours.
