

Why do we need energy storage systems?

As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

How do energy storage systems work?

In the conventional approach, which involves a single power conversion stage, the energy storage system is connected directly to the DC link of the converter (Fig. 4 c). Increasing its working voltage requires larger serially-connected cell strings, leading to reductions in system-level reliability.

Why do energy storage systems need a DC connection?

DC connection The majority of energy storage systems are based on DC systems (e.g.,batteries,supercapacitors,fuel cells). For this reason,connecting in parallel at DC level more storage technologies allows to save an AC/DC conversion stage,and thus improve the system efficiency and reduce costs.

What is a supercapacitor energy storage system?

A 400 kW, 1.0 kWh supercapacitor energy storage system that aims at improving the power quality in the electrical grid, both in steady state (e.g., harmonic compensation) and during transients (e.g., fault-ride through). A 100 kW, 200 kWh battery energy storage system, that is based on distributed MMC architecture.

What is a battery energy storage system?

A 100 kW, 200 kWh battery energy storage system, that is based on distributed MMC architecture. A battery module is connected directly to the half-bridge cell of the MMC, working both for control and energy storage purposes.

Why should energy storage systems be tested?

The advantages of such testing setup are clear: the energy storage systems can be tested under realistic conditions, taking into account the grid complexity. This is particularly important when dynamic studies are involved.

Add to this the serious issue of battery waste and the toxic process of recycling them and it is clear that now is the time for data centres to take another look at their power supply, sourcing more environmentally safe, longer ...
