

Uninterruptible Power Supply for Tbilisi Power Distribution

An uninterruptible power supply (UPS) is a device, that allows a computer to continue operating for at least a short period of time when electrical power supply is interrupted. The power supply that UPS stores and maintains over a period of time helps you finish the work you started and protect your documents or data from loss.

UPS for utilities can provide the uptime you need to safely switch to a backup generator or power down without damaging equipment. Smaller, remote installations can back up the overall power distribution system and support on-going computerized operations in the substations so energy can continue to reach customers even during extreme conditions that ...

PowerIT is an expert in low-voltage networks, generators, uninterruptible power supply systems (UPS) and smart home. We offer modern solutions for fire and security alarms, automation and control and measuring equipment. High-power UPS systems use thyristors with forced commutation circuits as the power switches. Systems with ratings less than 200 kVA now use power transistors or insulated-gate bipolar transistors as the power switches. Fig. 63 shows a circuit diagram for a UPS system using a three-phase, pulse-width-modulated inverter supplied from a battery and feeding a transformer ...
